

Capabilities inventory

What exists, where it lives, and which phase shipped it. Per the orchestrator brief §5a, this file — not any module specification — answers *"has this already been built?"*. Check it before starting any module, and update it in the same change that ships a feature.

Module specs deliberately do **not** name file paths or build order; that information lives here, where it can be corrected when code moves.

Shared core domain (brief §1a)

Capability	Where	Shipped by
Merchant — global reference data, kinds, aliases, default categories	<code>apps/api/app/models/core.py</code>	Phase 0
Category — 3-tier tree, <code>code_en + display_name_pt</code> , <code>brand_axis</code> , domain/level CHECK invariants	<code>apps/api/app/models/core.py</code>	Phase 0
Tag — household-scoped labels	<code>apps/api/app/models/core.py</code>	Phase 0
Document — SHA-256 content addressing, magic-byte validation, storage outside the web root	<code>apps/api/app/models/core.py</code> , <code>apps/api/app/services/documents.py</code>	Phase 0
Link — polymorphic reconciliation edges, <code>RECEIPT_TRANSACTION / CLAIM_TRANSACTION / ...</code>	<code>apps/api/app/models/core.py</code>	Phase 0
ReviewTask — backs the shared Review Queue	<code>apps/api/app/models/core.py</code>	Phase 0
AuditLog + <code>record()</code> / <code>snapshot()</code> helpers	<code>apps/api/app/models/core.py</code> , <code>apps/api/app/core/audit.py</code>	Phase 0
Setting — scoped config; <code>confidence.auto_accept</code> (0.90), <code>confidence.review</code> (0.60)	<code>apps/api/app/services/settings_service.py</code>	Phase 0
ImportBatch , ProcessingJob (unique <code>idempotency_key</code>)	<code>apps/api/app/models/core.py</code>	Phase 0

Platform

Capability	Where	Shipped by
Docker Compose stack — Postgres 16, Redis 7, API, Celery worker, Caddy+SPA	<code>docker-compose.yml</code> , <code>docker-compose.dev.yml</code>	Phase 0
Task runners with engine auto-detection (<code>docker compose / podman-compose</code>)	<code>Makefile</code> , <code>fm</code>	Phase 0
Alembic migrations; the API migrates on boot	<code>apps/api/alembic/</code> , <code>apps/api/docker-entrypoint.sh</code>	Phase 0
Celery worker + <code>claim_job()</code> idempotency gate	<code>apps/api/app/worker.py</code>	Phase 0
UUID v7 primary keys generated in Python	<code>apps/api/app/core/ids.py</code>	Phase 0
Decimal EUR money helpers — <code>to_eur</code> , <code>eur_sum</code> , <code>roi_pct</code> , <code>appreciation_eur</code>	<code>apps/api/app/core/money.py</code>	Phase 0
pt-PT formatting — EUR, dates, percentages, relative staleness	<code>apps/web/src/lib/format.ts</code>	Phase 0
Fixed-window rate limiting (fails open)	<code>apps/api/app/core/ratelimit.py</code>	Phase 0
Security headers middleware	<code>apps/api/app/main.py</code>	Phase 0
Signed, time-limited document URLs (HMAC, 15 min)	<code>apps/api/app/core/security.py</code> , <code>apps/api/app/api/routers/documents.py</code>	Phase 0
OpenAPI → TypeScript contract generation	<code>apps/api/app/openapi_export.py</code> , <code>apps/web/src/api/schema.d.ts</code>	Phase 0

Identity, household and access (M7)

Capability	Where	Shipped by
<code>User</code> , <code>Household</code> , <code>HouseholdMember</code> , <code>Entity</code> , <code>Session</code>	<code>apps/api/app/models/household.py</code>	Phase 0
Argon2 login, Redis-cached server-side sessions, double-submit CSRF	<code>apps/api/app/services/auth.py</code>	Phase 0

Capability	Where	Shipped by
RBAC gates — <code>require_write</code> , <code>require_owner</code> , <code>resolve_write_entity</code>	<code>apps/api/app/api/deps.py</code>	Phase 0
Member and entity management, last-OWNER safeguard, dependent profiles	<code>apps/api/app/services/household_service.py</code>	Phase 0
Global entity selector, persisted per session and keyed into every query	<code>apps/web/src/components/entity-selector.tsx</code> , <code>apps/web/src/features/auth/session.tsx</code>	Phase 0

Shared frontend layer

Capability	Where	Shipped by
App shell — sidebar, nav, theme toggle, mobile drawer	<code>apps/web/src/components/app-shell.tsx</code>	Phase 0
UI primitives — button, card, dialog/sheet, select, table, dropdown, tabs, slider, tooltip, popover	<code>apps/web/src/components/ui/</code>	Phase 0
Generic Review Queue (Confirm / Fix / Dismiss)	<code>apps/api/app/api/routers/review.py</code> , <code>apps/web/src/routes/review.tsx</code>	Phase 0
Shared transaction picker — proposes ledger lines near a date and amount	<code>apps/web/src/components/transaction-picker.tsx</code>	Phase 1 (M9)
URL-backed filter state feeding TanStack Query keys	<code>apps/web/src/lib/filters.ts</code>	Phase 1 (M9)
API client with CSRF handling and typed errors	<code>apps/web/src/lib/api.ts</code>	Phase 0

Reference data surfaces

Capability	Where	Shipped by
Merchant CRUD + Portuguese NIF checksum validation	<code>apps/api/app/api/routers/reference.py</code>	Phase 0

Capability	Where	Shipped by
Category read API (filter by domain, level, parent)	apps/api/app/api/routers/reference.py	Phase 0
Tag CRUD	apps/api/app/api/routers/reference.py	Phase 0
pt-PT grocery taxonomy seeded from the canonical JSON (27 L1 nodes)	apps/api/app/seed/__init__.py	Phase 0
Portuguese merchant seed (Continente, Pingo Doce, Auchan, Galp, EDP, ...)	apps/api/app/seed/__init__.py	Phase 0

LEGO collection (M9)

Capability	Where	Shipped by
LegoSetModel , LegoSetInstance , StorageLocation	apps/api/app/models/lego.py	Phase 1
Collection overview, catalog grid, detail sheet, storage sheet	apps/web/src/features/lego/	Phase 1
Brickset provider behind a MetadataProvider protocol, opt-in via Setting	apps/api/app/services/lego_provider.py	Phase 1
Filtered summary, tri-state discovery filters, area-level storage filter, field+direction sort	apps/api/app/services/lego_service.py	Phase 1 (M9.1)
Derived RRP appreciation/ROI, cumulative acquisition timeline	apps/api/app/services/lego_service.py	Phase 1 (M9.1)
GET /lego/export.xlsx workbook export (copies, sets, storage)	apps/api/app/services/lego_export.py	Phase 1 (M9.1)
Exact release_date / retirement_date , with is_retired waiting for the date to pass	apps/api/app/models/lego.py	Phase 1 (M9.2)
Full catalog editing from the detail sheet («Editar conjunto» tab)	apps/web/src/features/lego/detail-sheet.tsx	Phase 1 (M9.2)
Collapsible two-level storage filter (areas, then containers)	apps/web/src/features/lego/storage-filter.tsx	Phase 1 (M9.2)

Capability	Where	Shipped by
Real household inventory as seed data (93 sets, 97 copies)	<code>apps/api/app/seed/data/lego-inventory.json</code>	Phase 1 (M9.2)

First-run setup (M10)

Capability	Where	Shipped by
<code>GET /setup/status</code> , <code>POST /setup</code> — the only unauthenticated write, one-shot	<code>apps/api/app/api/routers/setup.py</code>	Phase 1 (M10)
Household + first OWNER + entity + default settings bootstrap	<code>apps/api/app/services/setup_service.py</code>	Phase 1 (M10)
Setup screen chosen automatically when there is no session and no user	<code>apps/web/src/routes/setup.tsx</code>	Phase 1 (M10)

Not yet built

Capability	Owning module
<code>Transaction</code> ledger, <code>CsvMapping</code> , statement import	M2 — Banking
<code>/api/transactions/suggest</code> currently answers <code>ledger_available: false</code>	M2 — Banking
Receipt ingestion, OCR, master products, price history	M1 — Supermarket
Health claims, utilities, vehicles, assets, dashboards	M3–M6, M8
Playwright e2e tooling (<code>apps/web/tests/e2e/</code>)	first module that needs it
